NEUROBIOLOGY OF AGING

VOLUME 2 1981

SUBJECT INDEX

Acetylcholine
  aging, 3, 165
  alanine, 165
  Alzheimer's disease, 205
  amino acid metabolism, 165
  aspartate, 165
  carbohydrate metabolism, 165
  choline, 205
  dementia, 205
  electrophysiology, 3
  GABA, 165
  GABA receptors, 3
  glutamate, 165
  glutamine, 165
  hippocampal pyramidal cells, 3
  hypoxia, 165
  memory, 205
  muscarinic binding sites, 3
  neurotransmitters, 3
  serine, 165
Acetylcholine and aging, 99
  cortex
  hippocampus
  memory
  presynaptic mechanisms
Acetylcholine and memory, 99
  aging
  cortex
  hippocampus
  presynaptic mechanisms
Active avoidance, 209
  aging effects
  footshock
  open field
  passive avoidance
  phosphatidylserine
Activity, 221
  aging
  A/J mice
  C57BL/6J mice
  motor performance
  strain differences
Age differences, 315
  category scaling
  sex differences
  taste discrimination
Aging
  acetylcholine, 3, 99, 165
  active avoidance, 209
  activity, 221
  A/J mice, 221
  alanine, 165
  Alzheimer's disease, 251, 257
  amino acid metabolism, 165
  cAMP, 95
  aspartate, 165
basal lamina, 285
benzodiazepine, 309
benzodiazepine receptor binding, 83
binding sites, interactions, 309
blood-brain barrier, 285
brain, rat, 37
brain receptors, 83
C57BL/6J mice, 193, 221
carbohydrate metabolism, 165
CBF_1 mice, 199
central nervous system, human, 257
central nervous system, rat, 257
cerebellar cortex, 61
cerebellar pathology, 15
cerebral capillaries, 285
cerebral cortex, 41
cholecystokinin octapeptide, 251
choline, 105
choline acetyltransferase, 41, 91, 251
cholinergic function and memory, 105
CL 218,872, 83
cortex, 99, 105
cortical pyramidal cells, 27
dehydration, 293
diazepam, 83
dopamine-β-hydroxylase, 251
dopamine turnover, 193
dopaminergic system, 229
electrophysiology, 3
endothelial mitochondria, 285
estradiol benzoate, 215
estrous cycle, 215
exploratory behavior, 199
flunitrazepam, 83
footshock, 209
GABA, 165, 309
GABA neurotransmission, 95
GABA receptors, 3
glial reactivity, 265
glutamate, 165
glutamic acid decarboxylase, 41, 251
glutamine, 165
golden hamster, female, 215
haloperidol, 193
hamster, 27
hemisphere asymmetry, 187
hippocampal pyramidal cells, 3
hippocampus, 41, 99, 105, 199
hippocampus, semithin sections
humans, 251
Huntington's disease, 257
hydrogen bonding and taste sensitivity, 173
hypothalamo-neurohypophyseal system, 293
hypoxia, 37, 165
inhibitory functioning, 187
inter-endothelial tight junctions, 285

kidney receptors, 83
LH release, 215
LHRH stimulation, 215
life-span, 187
Macaca nemestrina, 61
magnitude estimation, 173
monoamine levels, 37
morphological changes, 61
morphology, 285
morphometry, 27
motor performance, 221
muscarinic binding sites, 3
neuronal density, 265
neuronal RNA, 143
neurotensin, 257
neurotransmitters, 3
nigrostriatal system, 193
noise, 143
norepinephrine, 95
nuclear envelope invaginations, 27
open field, 209
opiate receptors, 49
parallel fibers, 15
passive avoidance, 209
phosphatidylserine, 209
piracetam, 105
presynaptic mechanisms and memory, 99
Purkinje neurons, 15, 95
radial maze, 41
renin, 293
retina, 229
retinal structure, 133
Ro5-4864, 83
senile plaques, 251
sensitivity to pain, 49
serine, 165
serotonin, 199
serum corticosterone levels, 143
somatostatin, 251, 257
spatial memory, 41
strain differences, 221
striatum, 105
substance P, 251, 257
sweeteners, 173
taste detection thresholds, 173
tyrosine hydroxylase, 41
vasoactive intestinal peptide, 251
vasopressin, 293
visual evoked potential, 187
visual system, 187
water deprivation, 293

A/J mice, 221
- activity
- aging
- C57BL/6J mice
- motor performance
- strain differences

Alanine, 165
- acetylcholine
- aging
- amino acid metabolism
- aspartate
- carbohydrate metabolism
- GABA
- glutamate
- glutamine
- hypoxia
- serine

Alzheimer's disease
- acetylcholine, 205
- aging, 251, 257
- central amine metabolism, 57
- central nervous system, human, 257
- central nervous system, rat, 257
- cerebrospinal fluid, 57
- choice reaction time, 113
- cholecystokinin octapeptide, 251
- choline, 205
- choline acetyltransferase, 9, 251
- cognitive deficit, 57
- cognitive loss, 277
- dementia, 205
- dopamine-β-hydroxylase, 251
- glutamic acid decarboxylase, 251
- histocompatibility antigens, 277
- humans, 251
- Huntington's disease, 257
- memory, 205
- neurotensin, 257
- platelet monoamine oxidase activity, 57
- senile dementia, 9, 277
- senile plagues, 251
- simple reaction time, 113
- somatostatin, 9, 251, 257
- substance P, 251, 257
- vasoactive intestinal peptide, 251

Amino acid metabolism, 165
- acetylcholine
- aging
- alanine
- aspartate
- carbohydrate metabolism
- GABA
- glutamate
- glutamine
- hypoxia
- serine

cAMP, 95
- aging
- GABA neurotransmission
- norepinephrine
- Purkinje neurons

Animal models, aging, 33
- Fisher 344 rat
- locus coeruleus
- neuron counts
- species differences

Apomorphine
- aging and prolactin secretion, 119

Aspartate, 165
- acetylcholine
- aging
- alanine
- amino acid metabolism
- carbohydrate metabolism
- GABA
- glutamate
- glutamine
- hypoxia
- serine

Augmenters, 303
- cortical inhibition
- hemispheric asymmetry
- life-span
- reducers
- visual evoked potentials

Basal lamina, 285
- aging
- blood-brain barrier
- cerebral capillaries
- endothelial mitochondria
- inter-endothalial tight junctions
- morphology

Benzodiazepine, 309
- aging
- binding sites
- GABA

Benzodiazepine binding and aging, 83

brain receptors
kidney receptors
Binding sites, interactions, 309
aging
benzodiazepine
GABA
Blood-brain barrier, 285
aging
basal lamina
cerebral capillaries
endothelial mitochondria
inter-endothelial tight junctions

central nervous system, human, 257
central nervous system, rat, 257
cholecystokinin octapeptide, 251
choline acetyltransferase, 251
dopamine-β-hydroxylase, 251
glutamic acid decarboxylase, 251
humans, 251
Huntington's disease, 257
neurotensin, 257
senile plaques, 251
somatostatin, 251, 257
substance P, 251
vasoactive intestinal peptide, 251
Sweeteners, 173
aging
hydrogen bonding and taste sensitivity
magnitude estimation
taste detection thresholds

Taste detection thresholds, 173
aging
hydrogen bonding and taste sensitivity
magnitude estimation
sweeteners
Taste discrimination, 315
age differences
category scaling
sex differences
Tyrosine hydroxylase, 41
aging

cerebral cortex
choline acetyltransferase
glutamic acid decarboxylase
hippocampus
radial maze
spatial memory

Vasoactive intestinal peptide, 251
aging
Alzheimer's disease
cholecystokinin octapeptide
choline acetyltransferase
dopamine-β-hydroxylase
glutamic acid decarboxylase
humans
senile plaques
somatostatin
substance P
vasoactive intestinal peptide
Vasopressin, 293
aging
dehydration
hypothalamo-neurohypophyseal system
renin
water deprivation
Visual evoked potentials
aging, 187
augmenters, 303
cortical inhibition, 303
hemisphere asymmetry, 187, 303
inhibitory functioning, 187
life-span, 187, 303
reducers, 303
visual system, 187
Visual system, 187
aging
hemisphere asymmetry
inhibitory functioning
life-span
visual evoked potential

Water deprivation, 293
aging
dehydration
hypothalamo-neurohypophyseal system
renin
vasopressin
